

VENT HEATER

Installation Manual

Vent Heater Installation Manual

This installation shall be completed by a qualified electrician, certified to complete work in the geographic location in which this vent heater is being installed.

1. Install the vent heater assembly onto the mating male bayonet.
2. Orientate the vent heater so the conduit access port is vertical and in the center. This will help prevent moisture from pooling inside the conduit access port.
3. Tighten the bayonet clamp around the bayonet connection flanges.
4. Open the conduit access port and feed the two supply wires into the conduit access port.
5. Strip the supply wires back 1/4" to 3/8".
6. After opening the orange levers, insert the supply wires into the WAGO connectors as shown. Close the orange levers. If installing in the United States, following the NEC Color Code, these supply wires will be black (live) and white (neutral) instead of the red wires that are shown. Because the vent heater utilizes a simple resistive band heater, the installation location of these two wires does not matter.
7. Push the wires back inside the conduit access port and replace the cover.
8. The vent heater assembly is now installed and ready for operation.
